OBJECTIVE

To realign my career path toward Adobe Experience Manager (AEM) by taking on an AEM-focused role once again. I aim to rebuild and strengthen my expertise in AEM and related platforms, contribute meaningfully to the company's success, and continue growing through new challenges, experiences, and learning opportunities in a dynamic work environment.

SUMMARY

- More than 6 years of experience in web application development.
- Experienced full stack in various Adobe platforms like AEM and Adobe Analytics, Adobe Target
- Hands on experience in web application development using HTML5, CSS3, HTML, CSS, Javascript, jQuery, AJAX and JSON and also frameworks like Angular, NodeJS, ReactJs, Java Spring Boot, PHP Laravel, PHP Codeigniter, SQL
- Hands on experience with CI/CD Pipeline, SonarQube integration, Jenkins configuration, Gitlab, Github, Jira, Azure Devops
- Experienced in an Agile Scrum Team
- 2 years experience with Teaching Computer Programming

TECHNICAL SKILLS

- **Frontend:** HTML, HTML5, CSS, SASS, LESS, JavaScript, Typescript, jQuery, ReactJS, Angular
- **Content Management System and Platforms:** Adobe Experience Manager, Adobe Target, Adobe Analytics
- **API Development Skills:** NodeJS, Java Spring Boot, PHP Laravel, PHP, REST API, SQL Programming

EDUCATION & CERTIFICATION

- Bachelor Degree in Information Technology
- Philippine Civil Service Professional
- Adobe Commerce Professional - Magento Certification
- Skillsoft: ChatGPT Prompt Engineering Examples and Use Cases
- Skillsoft: AI APIs for Practical Applications: An Introduction
- Skillsoft: Artificial Intelligence and Machine Learning
- Skillsoft: API Security

- Skillsoft: Application Security Awareness & Validation
- Skillsoft: Secure Application Architecture & IAM
- Google Analytics for Beginners

PROFESSIONAL EXPERIENCE

2025/06-2026-02

Senior Developer

Company: Myridius

Project: REMY2.0

Project Description: This project focuses on developing microservices for a Dine Reservation System, which enables administrators to automatically assign tables and chairs to customer parties based on reservation details. The system ensures efficient resource allocation and a seamless dining experience through scalable and modular microservice architecture.

Responsibilities:

- Designed and developed RESTful APIs using Java Spring Boot and SQL for various modules, including resource management, category handling, and inventory tracking.
- Created and maintained JUnit test cases to ensure code reliability, validate business logic, and support continuous integration.
- Collaborated with cross-functional teams to define requirements, estimate effort, and design efficient feature implementations.
- Deployed and validated new features in lower environments to ensure stability before production release.
- Created and documented API specifications using Swagger for clear communication and integration support.
- Conducted peer code reviews to maintain code quality, consistency, and adherence to best practices.
- Performed root cause analysis (RCA) for reported issues and implemented effective fixes to prevent recurrence.

Technologies used:

- Java Springboot, SQL
- MariaDB, Swagger, Postman
- Jira, Github, Gitlab

2024/12 – 2025/05

Senior Developer

Company: Myridius

Project: Sustainment

Project description: This project involves providing operational support for four distinct applications built using different technologies, including Angular, Node.js, Java Spring Boot, and more. The support includes triaging issues, performing root cause analysis (RCA), offering on-call support, and implementing enhancements to improve system functionality, performance, and user experience.

Responsibilities:

- Design and implement enhancement features using Angular, Node.js, and Java Spring Boot, contributing to the continuous improvement of the platform's functionality, user experience, and performance.
- Collaborate closely with the management team to plan project timelines, estimate resources, and define achievable milestones, ensuring alignment between technical execution and business goals.
- Discuss with both internal teams and customers to gather requirements, set expectations, and refine project scope, ensuring clear communication and efficient project delivery.
- Analyze, triage, and investigate logged issues and incidents in production environments, providing thorough Root Cause Analysis (RCA) and delivering timely fixes to minimize downtime and prevent future occurrences.
- Regularly track and review code for quality, consistency, and adherence to best practices, while providing constructive feedback and suggesting solutions. Offer mentorship and training to new team members, fostering a collaborative and high-performance development environment.
- On-Call Support: Provide on-call support via PagerDuty, ensuring rapid response and resolution of critical issues during off-hours, maintaining platform stability and ensuring minimal disruptions to users.
-

Technologies used:

- Angular, SASS, Material
- NodeJS, Java Spring Boot, SQL
- Postman, DBeaver, MariaDB
- ServiceNow, Jira, PagerDuty

2024/07 – 2024/12

Lead / Senior Developer

Company: Myridius

Project: AEM Enhancement

Project description: This project aims to enhance an Adobe Experience Manager (AEM) project by integrating ReactJS for dynamic user interfaces, creating JUnit tests for existing Java classes to ensure code quality and reliability, and integrating SonarQube for continuous code quality inspection.

Responsibilities:

- Collaborate with the management team to define project scope, plan development cycles, and estimate resource requirements, ensuring that deliverables align with business priorities and technical capabilities.
- Design and implement JUnit tests for existing Java classes across five AEM projects, enhancing code coverage, improving test reliability, and ensuring that features are rigorously tested before production deployment.
- Lead the development of new enhancement features for five AEM projects, continuously improving platform functionality, user experience, and performance by implementing new requirements and addressing feedback.
- Integrate SonarQube into the development pipeline for comprehensive code quality inspection, enabling automatic detection of bugs, vulnerabilities, and code smells, and ensuring high-quality, maintainable code throughout all projects.
- Actively track, review, and analyze code for the Front-End team, providing feedback, suggesting improvements, and ensuring adherence to best practices. Additionally, provide mentorship and training for new members, supporting their technical growth and integration into the team.

- Engage in regular discussions, meetings, and planning sessions with internal teams and customers to gather requirements, clarify objectives, and ensure alignment on project goals, timelines, and expectations.

Technologies used:

- ReactJS, SASS, Typescript, JSON, Gradle
- AEM, Java Sling Model, JUnit
- Jira, SonarQube

2021/09 – 2024/07

Application Development Senior Analyst

Company: Accenture, Inc.

Project: CIO

Project description: This project involves developing Adobe Experience Manager (AEM) components and services for an internal web project, integrating Adobe Analytics and Adobe Target for enhanced tracking and personalized user experiences, and triaging and fixing any bugs found in production and lower environments.

Responsibilities:

- Build reusable, modular components using AEM's Sling Model and HTL (Sightly), alongside JavaScript and jQuery, ensuring a scalable and maintainable codebase for consistent content delivery across multiple pages and sections.
- Develop and maintain backend services using Java and Sling Servlets to manage content delivery, data processing, and business logic, ensuring seamless integration with AEM's JCR (Java Content Repository) for dynamic content management.
- Implement Adobe Analytics to track user behavior, page views, clicks, and key engagement metrics, providing insights that drive data-informed decisions and optimizing the user experience across the web platform.
- Proactively triage and resolve both AEM and Analytics-related issues across all environments, ensuring minimal disruption and swift resolution to enhance platform stability and performance.
- Oversee the integration of Adobe Target with Adobe Analytics and AEM, ensuring the proper functioning of targeted content delivery, personalization, and A/B testing features for optimized user experiences.
- Provide hands-on training and mentorship to junior developers and cross-functional teams, enhancing their technical skills and promoting best practices for AEM development, Analytics, and other related technologies.
- Lead code reviews for team members, ensuring adherence to best practices, high code quality, and maintaining consistency across the project, while mentoring developers on writing efficient, maintainable code.
- Requirements Discussion & Estimation: Collaborate with stakeholders to discuss requirements, estimate user stories, and suggest optimal processes to streamline workflows, ensuring alignment between business goals and technical implementation.
- Led deployments for code changes to higher environments using Adobe Launch, ensuring smooth transitions and validating the stability and functionality of new features.
- Led the Integration of Adobe Analytics with an internal mobile application, and provided **training and knowledge transfer** to other teams, driving best practices in mobile analytics. Facilitate discussions with business and app teams to ensure seamless integration and optimal data tracking.

Technologies used:

- Sightly, Javascript, JQuery, SASS
- AEM, Adobe Analytics, Adobe Launch, Adobe Target, Java Sling Model, Adobe Workspace
- Browserstack, Adobe Cloud Debugger, Charles Proxy, Fiddler
- Azure Devops

2019/05 – 2021/03

Computer Programming Teacher / Instructor

Company: ACLC College of Tacloban

Job description: Computer Programming Teacher with expertise in both Java and VB.NET to teach and guide students through the fundamentals of programming and advanced concepts in these languages.

Responsibilities:

- Design comprehensive lesson plans for Java and VB.NET courses, covering topics from introductory programming to advanced concepts
- Teach programming fundamentals, introduce key object-oriented programming concepts
- Review student projects and assignments, providing constructive feedback and guidance to help them improve their coding skills
- Develop and administer quizzes, assignments, and exams to evaluate student understanding and progress.
- Develop and update course materials, exercises, and programming projects that are relevant to current industry practices.
- Mentor students on their Capstone Project

Technologies used:

- Java, VB.NET, SQL

2018/08 – 2019/02

Fullstack Web Developer

Project: Zeend

Project Description: Zeend is an innovative startup focused on building a cutting-edge e-commerce platform designed to revolutionize online shopping. The platform will serve as a one-stop digital marketplace similar to major players like Shopee, Lazada, and Alibaba.

Responsibility:

- Design and develop the frontend of the e-commerce website using HTML, CSS, jQuery, and JavaScript, ensuring a visually appealing, intuitive, and fully responsive user interface that provides an exceptional shopping experience across all devices.
- Implement and maintain robust backend functionality using PHP CodeIgniter, ensuring smooth integration with the frontend, efficient data handling, and high-performance server-side operations.
- Design and optimize SQL databases for efficient data storage and retrieval, ensuring fast query performance, data integrity, and the ability to scale with growing product catalogs and user traffic.
- Develop key e-commerce features such as user authentication, shopping cart functionality, product search, order management, and payment gateway integration, to provide a seamless shopping experience for customers and sellers alike.

- Proactively diagnose and resolve any frontend or backend issues, ensuring minimal downtime and a smooth, uninterrupted user experience while addressing any technical challenges in a timely manner.
- Efficiently deploy code changes to staging and production environments via GoDaddy hosting, ensuring code updates are thoroughly tested and smoothly transitioned without disruption to the live platform.
- Actively engage with clients to discuss feature implementations, gather feedback, and recommend improvements, ensuring that their needs are met while aligning the technical solution with their business goals.

Technologies Used:

- HTML, CSS, JQuery, Javascript, JSON, AJAX
- PHP Codeigniter, SQL
- GoDaddy

2017/05 – 2018/02

Full-stack Web Developer

Company: Aktus Global Management

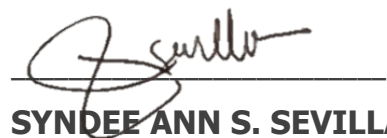

Project description: Aktus Global Management is a startup company that offers various Accounting-related platforms. I was involved in various AGM projects including Accounting reviewer web platforms, DashFS, and eBIRForms platforms.

Responsibilities:

- Personally developed an internal Pomodoro website to improve team productivity and time management.
- Collaborated with teams on the development of key projects, including:
- Accounting board online reviewer
- Financial statement-related website
- Managed the deployment of web applications to both Test and Production Environments via AWS, ensuring smooth transitions and minimal downtime.
- Actively triaged and resolved issues, ensuring optimal performance and functionality of applications.
- Proposed and implemented web designs based on feedback from the team leader.
- Contributed to the development of an eBIRForm-like desktop application using VBScript, integrating it with an online website for seamless user interaction.

Technologies used:

- Javascript, JQuery, JSON, HTML, CSS, Bootstrap
- PHP MVC, SQL, VBScript
- AWS
